Lotus Domino Infrastructure Assessment

Is your Domino environment out of date? Slow? Inefficient?

Domino can do more than you may realize!

Talk to GreyDuck about a Server Assessment.

- Is your messaging system routing efficiently or are you wasting network bandwidth and CPU cycles?
- Are all of your Domino servers sending and receiving Internet messages?
- Are you using "Policies" to manage user configurations?
- Are your servers secure from the Internet?
- Are your servers gathering statistics and events to proactively notify you BEFORE a problem occurs?
- Are you using the features that are already built-in to the Domino server to get the information you need without relying on 3rd party applications?
- Are your Sametime servers working well?
- Are your applications throwing errors to the logs?
- Are your web sites working fast and efficiently? Are you logging and reporting on your web traffic?
- Who has access to your servers?
- Are you leveraging the functionality of Rooms and Resources in your scheduling environment?
- Is your mail out-of-hand? Does your company use Email as a document repository?
- Do you have a SPAM problem?
